

## LIST OF U.S. CUSTOMS LABORATORY METHODS

USCL NUMBER	METHOD	TITLE
69-01	ASTM C 573	<u>Method for Chemical Analysis of Fireclay and High Alumina Refractories</u>
69-02	ASTM D 1535	<u>Test Method for Specifying Color by the Munsell System</u>

# U.S. CUSTOMS LABORATORY METHODS

## USCL METHOD 69-01

Index

### ASTM C 573 Method for Chemical Analysis of Fireclay and High Alumina Refractories

Refractories

#### SAFETY PRECAUTIONS

*This method does not purport to address all of the safety problems, if any, associated with its use. It is the responsibility of the user of this method to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to its use.*

#### 0 INTRODUCTION

This method has been discontinued. It does not appear to be superseded by an equivalent ASTM method. The method is available in 1993 and older ASTM publications.

#### 1 SCOPE AND FIELD OF APPLICATION

The method consists of complete wet chemical analysis procedures for both fireclay and high alumina refractories. Results obtained are capable of satisfying the requirements of HTSUS 6902.

### **ASTM D 1535** **Test Method for Specifying Color by the Munsell System**

#### **SAFETY PRECAUTIONS**

*This method does not purport to address all of the safety problems, if any, associated with its use. It is the responsibility of the user of this method to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to its use.*

#### **1 SCOPE AND FIELD OF APPLICATION**

The method employs a widely used system of specifying color based on color perception attributes of hue value, and chroma. An attribute of porcelain is its high value. Nonadsorbant, fired ceramic articles with Munsell values of 9.0 or more are considered to be porcelain or china, which are classifiable as such under Harmonized Tariff Schedule of the United States (HTSUS) headings 6909, 6910, 6911, 6913 and 6914.
